In the terminal 1a, the screen constructor 24 reconstructs the transmitted picture, and the display controller 26 displays it on the display device 25 as shown in Fig. 4B. In this way, many menu items (icons) 26a-26n are displayed along with a menu item 27 of the picture immediately before the previous power off. Thus, the user selects a desired menu item from among the displayed menu items 26a-26n using the information input device 21. For example, when a web browser menu item (such as today's news or weather forecast) is selected, the requested information corresponding to the menu item is transmitted from the communication circuit 23 to the application server 7 via the network 2.
